Cut bricks and blocks

Fabricated brick specials

FACE

Prefabricated Brick Arches

Our prefabricated brick arches are made by cutting standard bricks to either voussoirs or skewbacks, then into brick slips. The brick slips are then bonded with an epoxy resin onto a composite lightweight block/cement board backing.

When on site the arches can easily be handled by two men, and are placed on the outside flange of the steel lintel. The joints between the brick slips are then pointed up as work proceeds.

INTRODUCTION

We carry out cutting and cutting and bonding of bricks and blocks to form special shapes to suit your requirements out of brick/blocks from your site or yard stocks.

RANGE

Over 100 different standard shaped specials can be produced using our methods from any make or type of brick provided. Also purpose made specials can be made to suit any non-standard angles or measurements.

QUALITY

The quality and accuracy of our special shapes conform with all current British Standards.

COLOUR MATCHING

The bricks used from your stocks should be a match to those used on the main structure and to maintain this match, the epoxy resin joint is coloured to suit the type of brick used.

STRENGTH

The joints of our fabricated specials range are glued with the latest epoxy resin brick adhesive which is fully tested for strength and durability, including frost resistance.

COST

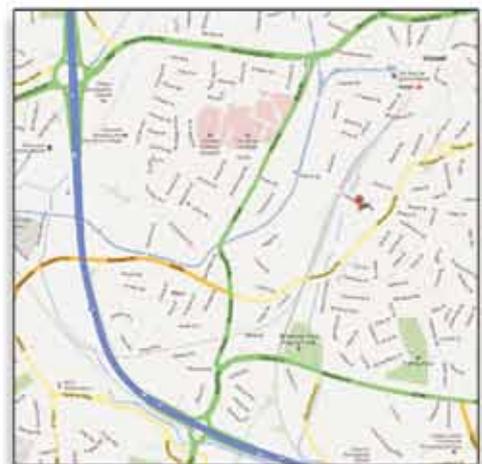

Our fabricated specials are competitively priced against traditional manufactured specials. You will also find that sending bricks to us for general cutting is more cost effective than carrying this work out on site.

DELIVERY TIMES

Cut bricks can normally be produced in 3 - 4 working days with cut and bonded specials produced in 6 - 7 working days.

HAULAGE

We offer a collection and delivery service to anywhere on the U.K. mainland.
